Hydrogen connected to carbon atoms is frequently part of the heterocyclic molecules.

Substitution of these hydrogen atoms with halogens leads to halogenated aromatic heterocyclic compounds.

When naming such compounds the side of the heterocyclic ring is labeled by the letters a, b, c, etc., starting from the atom numbered 1.

Therefore side [a] being between atoms 1 and 2, side [b] between atoms 2 and 3, and so on as shown below for pyridine. a b c d e f
